# SIM2Travel, China

SIM2Travel is a mobile operator which in addition to the mobile voice and short message service offers Single IMSI Multiple MSISDN (SIMM) solutions for mobile network operators (MNOs) in up to 20 countries. Currently SIM2Travel is cooperating with China Mobile and People's Telecom.

SIM2Travel is a new telecom operator who has no existing Operation Support System and whose business is to provide new telecommunications services with a cost-effective GSM international roaming solution.

The modules of mBOSS provided to SIM2Travel include the following:

- Customer management,
- Rating and Pricing,
- Accounting management,
- Payment and service control and
- Resource management

The key features of mBOSS include:

- Supports Billing Policy Management (BPM) and pricing plans.
- Supports Asset Management of service related resources like deposit, credit, score, credit rating and credit line.
- Supports extraction of statistics and settlement data from usage details, service charges, invoices and payment records and generates various dynamic reports.
- Highly customized to manage services (such as SM, CRBT and IVR) as well as to control message service provisions.
- Supports multiple languages.
- Supports Accounting Management.
- Customer Management and service control functions handle subscriber profiles, account information and service information.
- Handles Privilege Management for various staff members within the organization.
- Supports unlimited discount packages for subscribers to choose from.

XALTED in collaboration with UTStarcom is providing postpaid billing solution to SIM2Travel through mBOSS. The solution has been performing well since it was installed at the site in April, 2007.
